EXPERIENCE

Workforce Software – Software Engineer

Ann Arbor, Michigan

Jan. 2014 – Present

- Create dynamic mobile and desktop web pages for enterprise Time and Attendance software using CSS, HTML, and the ExtJS JavaScript framework following MVC architecture.
- Revamped our feature security framework while also introducing a new screen for managing user access across the system resulting in simplified customer configurations and reduced implementation costs.
- Served as a senior resource on the support development team aimed for troubleshooting critical customer issues by analyzing thread/heap dumps, running performance tools, querying databases, and debugging backend Java code.
- Assisted in enhancing our existing mobile web application using WebSQL and asynchronous JavaScript to provide an offline clocking solution to customers in industries that lack reliable internet connectivity for their employees.
- Collaborated with a team of developers to implement the client-side functionality of a new Schedule Bidding feature that can allow managers to fill hundreds of schedule openings at once.
- Implemented a sophisticated login page for our next generation clocking software that supports various forms of user authentication such as badge swiping and biometrics.

Thomson Reuters – Software Development Intern

Dexter, Michigan

May 2012 – Aug. 2013

- Contributed to the creation of professional tax and accounting software on the .NET framework (primarily C#).
- Collaborated with professional tax analysts to ensure products met the requirements of the customer and bug fixes were addressed in a timely manner.
- Created and implemented developer specifications based on a set of client feature requests.
- Altered database schema as needed for projects using the SQL database language.

DTE Energy – Information Protection Security Intern

Detroit, Michigan

Jun. 2011 – Sept. 2011

- Processed security requests for employee access on company software and assisted in standardizing the current environment to prevent future breaches.
